1 INTRODUCTION

IGSL Limited requested O'Callaghan Moran & Associates (OCM) to undertake a waste characterisation assessment of fourteen (14 No.) samples of made and natural ground collected from five (5 No.) cable percussion boreholes and nine (9 No.) trial pits from a site at in Monaghan. The samples were collected from two separate sections of a he site, the New Civic Centre and the Active Travel Roadway.

1.1 Methodology

IGSL provided a description of the ground conditions and collected samples of the soils from the sample locations. The samples were analysed at an accredited laboratory and the results formed the basis for a waste classification assessment, which was undertaken by OCM in accordance with the Environmental Protection Agency (EPA) Guidelines on the Classification of Waste (2015).

2 WASTE CLASSIFICATION ASSESSMENT

2.1 Soil Sampling and Laboratory Analysis

2.1.1 Site Investigation

The site investigation was completed by IGSL Limited in April and May 2023 and included the collection of fourteen (14 No.) composite samples. The location of the samples is shown on Figure 2.1 and 2.2. The logs for the samples are in Appendix 1.

2.1.2 New Civic Centre

The subsurface of the boreholes and trial pits comprise Natural Ground. There is topsoil at the surface of all locations. The subsurface comprises soft to firm, sandy gravelly CLAY to circa 1.20 mbgl. This transitions to stiff, sandy gravelly CLAY with cobble and boulder content to 3.00 mbgl. BH07 was terminated at 1.00 mbgl due to an obstruction.

2.1.3 Active Travel Roadway

There is topsoil at the surface of all locations.

The subsurface of BH01R and TP09R comprise Natural Ground. The subsurface at these locations is composed of soft to firm, slightly gravelly CLAY to 3.00 mbgl. This is underlain by very stiff sandy gravelly SILT to 4.00 mbgl. Dense, GRAVEL with cobble content was encountered to 4.60 mbgl.

There is Made Ground circa 2.00m in thickness at all other locations. The Made Ground at TP02R extends to 2.50 mbgl. The Made Ground comprises sandy gravelly CLAY with cobble content and non-natural material including fragments of red brick, concrete, plastic and metal wire. The Made Ground at TP02R, TP03R and TP05R contains non-natural material >2% of the soil matrix. The Made Ground is underlain by Natural Ground similar to that at BH01 and TP09R.

2.1.4 Sample Collection

IGSL collected the samples and placed them in laboratory prepared containers that were stored in coolers prior to shipment to Chemtest Ltd.

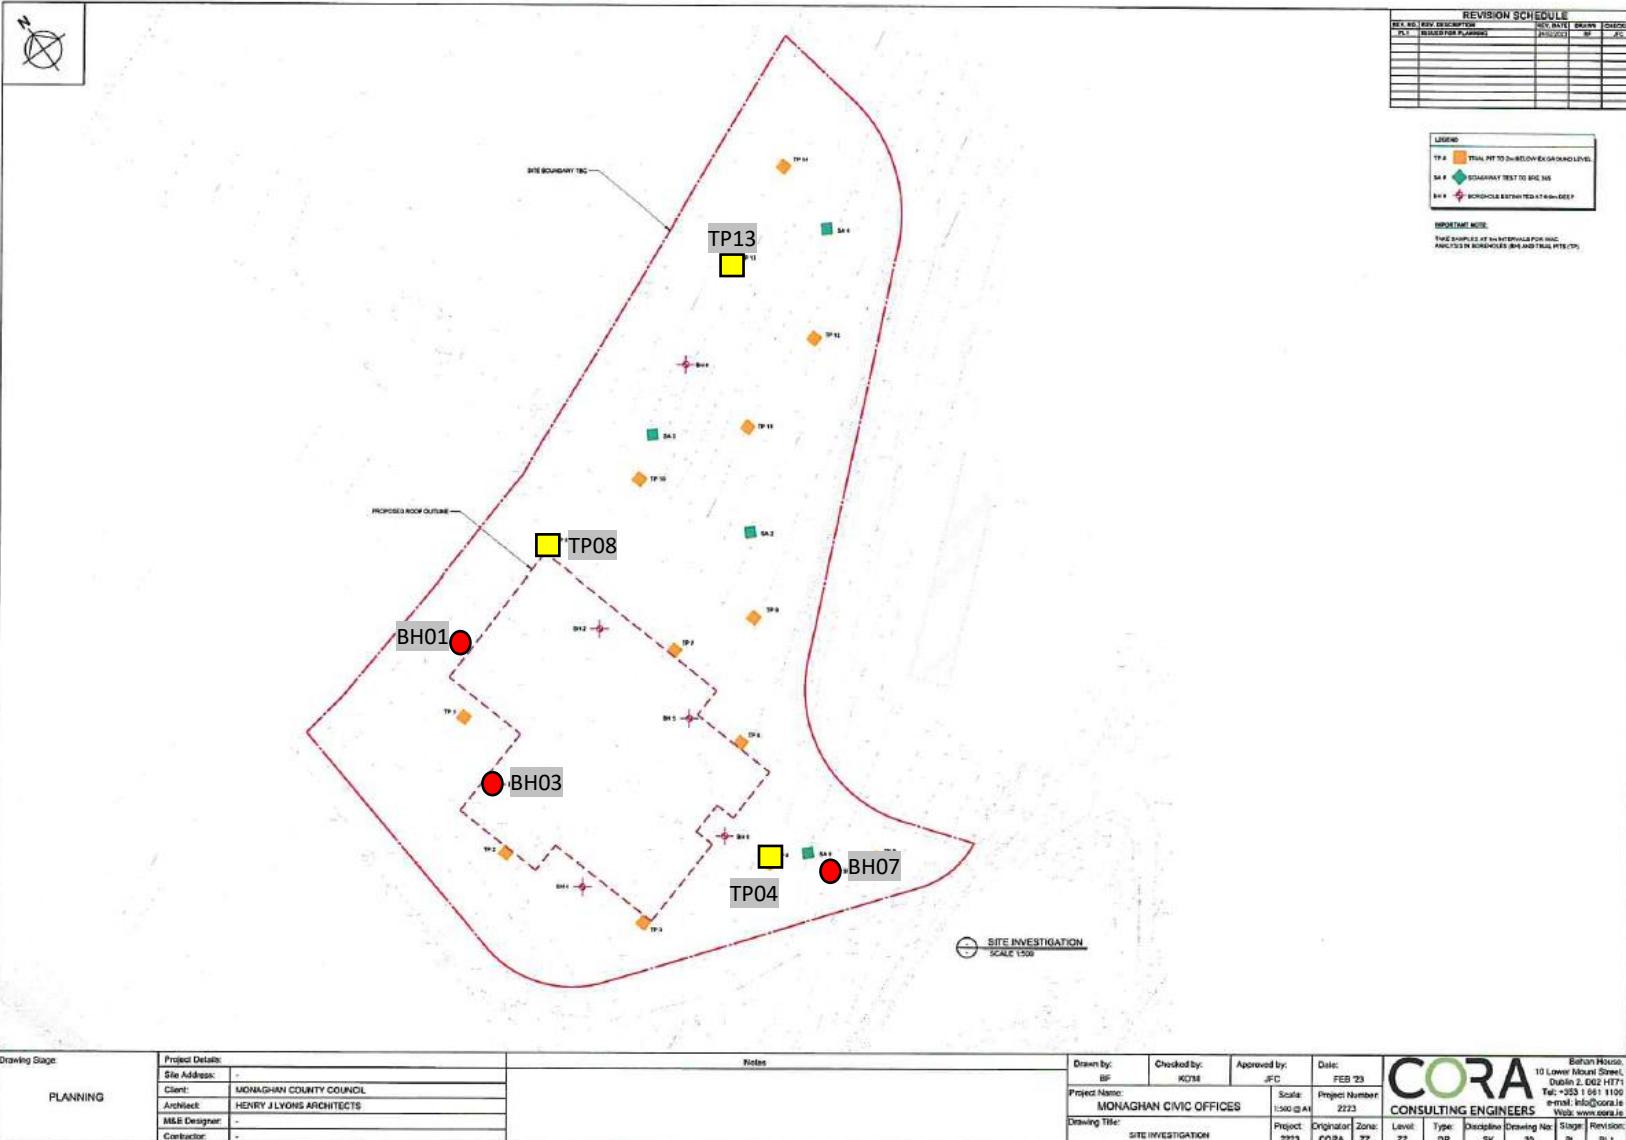

2.1.5 Laboratory Analysis

The samples were tested for, metals (arsenic, barium, cadmium, chromium, copper, mercury, molybdenum, nickel, lead, antimony, selenium and zinc), total organic carbon (TOC), BTEX (benzene, toluene, ethylbenzene and xylene) aliphatic and aromatic hydrocarbons, polychlorinated biphenyls (PCB), mineral oil, polyaromatic hydrocarbons (PAH) and asbestos. Leachate

generated from the samples was tested for arsenic, barium, cadmium, chromium, copper, mercury, molybdenum, nickel, lead, antimony, selenium and zinc, chloride, fluoride, soluble sulphate, phenols, dissolved organic carbon (DOC), total dissolved solids (TDS).

This parameter range facilitates an assessment of the hazardous properties of the waste, and also allows a determination of appropriate off-site management options based on the Waste Acceptance Criteria (WAC) applied by landfill operators.

The analytical methods were all ISO/CEN approved and the method detection limits were below the relevant guidance/threshold values. The full laboratory report is in Appendix 2.

2.2 Waste Classification

The Haz Waste Online Classification Engine, developed in the UK by One Touch Data Ltd, was used to determine the waste classification. This tool was developed specifically to establish whether waste is non-hazardous or hazardous and has been approved for use in Ireland by the Environmental Protection Agency. The full Waste Classification Report is in Appendix 3 and the results are summarised in Table 2.1 and 2.2.

Table 2.1 Waste Classification (New Civic Centre)

| Sample No. | Depth | Classification | LoW Code |
|------------|-------|----------------|----------|
| BH01 | 0.50 | Non-Hazardous | 17 05 04 |
| BH03 | 0.50 | Non-Hazardous | 17 05 04 |
| BH07 | 0.80 | Non-Hazardous | 17 05 04 |
| TP04 | 0.50 | Non-Hazardous | 17 05 04 |
| TP08 | 0.80 | Non-Hazardous | 17 05 04 |
| TP13 | 0.60 | Non-Hazardous | 17 05 04 |

Asbestos was not detected in any of the samples tested.

All samples are classified as non-hazardous and the appropriate List of Waste Code is 17 05 04 (Soil and Stone other than those mentioned in 17 05 03*).

Table 2.2 Waste Classification (Active Travel Roadway)

Asbestos was not detected in any of the samples tested.

The samples from TP02R, TP03R and TP05R are classified as non-hazardous and the appropriate List of Waste Code is 17 09 04 (Construction and Demolition Waste other than those mentioned in 17 09 03*).

All other samples are classified as non-hazardous and the appropriate List of Waste Code is 17 05 04 (Soil and Stone other than those mentioned in 17 05 03*).

2.3 Waste Acceptance Criteria

The results of the WAC testing are presented in Table 2.3 and 2.4, which includes for comparative purposes the WAC for Inert, Non Hazardous and Hazardous Waste Landfills pursuant to Article 16 of the EU Landfill Directive 1999/31/EC Annex II which establishes criteria and procedures for the acceptance of waste at landfills.

All samples from the New Civic Centre meet the inert WAC.

The samples from BH02R, TP01R and TP05R fro the Active Travel Roadway exceed the inert WAC.

Total Organic Carbon (TOC) exceeds the inert WAC in BH02R, TP01R and TP05R.

Sulphate exceeds the inert WAC in TP01R.

 PAH over 1mg/kg and Mineral Oil over 50 mg/kg exceeds limit at soil recovery site in Ireland

2.4 Waste Management Options

All of the soils are suitable for retention on site for landscaping or similar purposes. However if the soils are removed from the site options for recovery or disposal are outlined in this section.

The EPA has issued guidance on acceptance criteria for a range of parameters for soil recovery sites. This includes;

- Metals (solid conc. not leachability) in soil and stone (including As, Cd, Cr, Cu, Hg, Ni, Pb, Zn);
- Total organic carbon in soil and stone;
- Total BTEX (benzene, toluene, ethylbenzene, xylenes) in soil and stone;
- Mineral oil in soil and stone;
- Polycyclic aromatic hydrocarbons (PAHs) in soil and stone;
- Polychlorinated Biphenyls (PCBs) in soil and stone;
- Asbestos fibres in soil and stone.

The guidance requires that soils from brownfield sites should not exceed the limits for the parameters specified in Table 2.5 and 2.6. For metals limits have been specified for a range of soil types nationally separated into six domain areas.

Table 2.5 Soil Recovery Site Criteria

| Parameter | Limit for Soil Recovery Sites |
|-------------|-------------------------------|
| Total BTEX | 0.05 mg/kg |
| Mineral Oil | 50 mg/kg |
| Total PAHs | 1 mg/kg |
| Total PCBs | 0.05 mg/kg |

All samples from the New Civic Centre and BH01R and TP09R from the Active Travel Roadway meet the soil recovery criteria.

The remaining samples (BH02R and TP01R-TP05R) from the Active Travel Roadway do not meet the requirements for Soil Recovery Facilities as they are composed of Made Ground containing >2% non-natural material and/or exceed the inert WAC.

The soil and stone cannot be sent to soil recovery sites if the trigger levels for a particular domain are exceeded. There is however some flexibility in applying the limits. A derogation applies where up to three parameters can exceed the limit for a sample provided the concentration in the samples is no more than 1.5 times the trigger level. The site which is subject to this investigation is located in Domain 5 and the trigger levels are listed in Table 2.6.

Table 2.6 Soil Recovery Trigger Levels

| | | Domain 5 Trigger Level | 1.5 times Trigger Level |
|-----------------|--------------|------------------------|-------------------------|
| Arsenic | mg/kg | 41.5 | 62.25 |
| Cadmium | mg/kg | 1.42 | 2.13 |
| Chromium | mg/kg | 73.2 | 109.8 |
| Copper | mg/kg | 77.6 | 116.4 |
| Mercury | mg/kg | 0.302 | 0.453 |
| Nickel | mg/kg | 65.7 | 98.55 |
| Lead | mg/kg | 109 | 163.5 |
| Zinc | mg/kg | 224 | 336 |

All samples meet the soil recovery criteria for metal concentrations.

Waste management options are summarised on Table 2.7 and 2.8. All are subject to approval of the waste management facility operators. Class A material is suitable for soil recovery at permitted soil recovery sites. Class B-1 material is suitable for disposal to inert landfill. Class B-2 material is suitable for disposal to inert landfill with increased limits.

3 CONCLUSIONS AND RECOMMENDATIONS

3.1 Conclusions

3.1.1 Waste Classification

3.1.1.1 New Civic Centre

Asbestos was not detected in any of the samples tested.

All samples are classified as non-hazardous and the appropriate List of Waste Code is 17 05 04 (Soil and Stone other than those mentioned in 17 05 03*).

3.1.1.2 Active Travel Roadway

Asbestos was not detected in any of the samples tested.

The samples from TP02R, TP03R and TP05R are classified as non-hazardous and the appropriate List of Waste Code is 17 09 04 (Construction and Demolition Waste other than those mentioned in 17 09 03*).

All other samples are classified as non-hazardous and the appropriate List of Waste Code is 17 05 04 (Soil and Stone other than those mentioned in 17 05 03*).

If the soils have to be removed from the site the recovery/disposal options are discussed in Section 2.4.

3.2 Recommendations

OCM recommends that a copy of this report be provided in full to the relevant waste management facilities to which the subsoils will be consigned to confirm its suitability for acceptance.

Deviations

In accordance with UKAS Policy on Deviating Samples TPS 63. Chemtest have a procedure to ensure 'upon receipt of each sample a competent laboratory shall assess whether the sample is suitable with regard to the requested test(s)'. This policy and the respective holding times applied, can be supplied upon request. The reason a sample is declared as deviating is detailed below. Where applicable the analysis remains UKAS/MCERTs accredited but the results may be compromised.

Waste Acceptance Criteria

Landfill WAC analysis (specifically leaching test results) must not be used for hazardous waste classification purposes. This analysis is only applicable for hazardous waste landfill acceptance and does not give any indication as to whether a waste may be hazardous or non-hazardous.

Deviations

In accordance with UKAS Policy on Deviating Samples TPS 63. Chemtest have a procedure to ensure 'upon receipt of each sample a competent laboratory shall assess whether the sample is suitable with regard to the requested test(s)'. This policy and the respective holding times applied, can be supplied upon request. The reason a sample is declared as deviating is detailed below. Where applicable the analysis remains UKAS/MCERTs accredited but the results may be compromised.

Deviations

In accordance with UKAS Policy on Deviating Samples TPS 63. Chemtest have a procedure to ensure 'upon receipt of each sample a competent laboratory shall assess whether the sample is suitable with regard to the requested test(s)'. This policy and the respective holding times applied, can be supplied upon request. The reason a sample is declared as deviating is detailed below. Where applicable the analysis remains UKAS/MCERTs accredited but the results may be compromised.

Waste Classification Report

Waste Classification Report

HazWasteOnline™ classifies waste as either **hazardous** or **non-hazardous** based on its chemical composition, related legislation and the rules and data defined in the current UK or EU technical guidance (Appendix C) (note that HP 9 Infectious is not assessed). It is the responsibility of the classifier named below to:

- a) understand the origin of the waste
- b) select the correct List of Waste code(s)
- c) confirm that the list of determinants, results and sampling plan are fit for purpose
- d) select and justify the chosen metal species (Appendix B)
- e) correctly apply moisture correction and other available corrections
- f) add the meta data for their user-defined substances (Appendix A)
- g) check that the classification engine is suitable with respect to the national destination of the waste (Appendix C)

To aid the reviewer, the laboratory results, assumptions and justifications managed by the classifier are highlighted in pale yellow.

Waste Classification Report

HazWasteOnline™ classifies waste as either **hazardous** or **non-hazardous** based on its chemical composition, related legislation and the rules and data defined in the current UK or EU technical guidance (Appendix C) (note that HP 9 Infectious is not assessed). It is the responsibility of the classifier named below to:

- a) understand the origin of the waste
- b) select the correct List of Waste code(s)
- c) confirm that the list of determinants, results and sampling plan are fit for purpose
- d) select and justify the chosen metal species (Appendix B)
- e) correctly apply moisture correction and other available corrections
- f) add the meta data for their user-defined substances (Appendix A)
- g) check that the classification engine is suitable with respect to the national destination of the waste (Appendix C)

A3IFA-KKUCG-Y2DV7

To aid the reviewer, the laboratory results, assumptions and justifications managed by the classifier are highlighted in pale yellow.

Waste Classification Report

HazWasteOnline™ classifies waste as either **hazardous** or **non-hazardous** based on its chemical composition, related legislation and the rules and data defined in the current UK or EU technical guidance (Appendix C) (note that HP 9 Infectious is not assessed). It is the responsibility of the classifier named below to:

- a) understand the origin of the waste
- b) select the correct List of Waste code(s)
- c) confirm that the list of determinants, results and sampling plan are fit for purpose
- d) select and justify the chosen metal species (Appendix B)
- e) correctly apply moisture correction and other available corrections
- f) add the meta data for their user-defined substances (Appendix A)
- g) check that the classification engine is suitable with respect to the national destination of the waste (Appendix C)

THOIF-84IYH-BVHKT

To aid the reviewer, the laboratory results, assumptions and justifications managed by the classifier are highlighted in pale yellow.
