RECEIVED: 29/03/2023

Dear Sir /Madame,

Re; Proposal to build 9 units Social housing development, Grove street, Roscrea.

We are raising an objection with Tipperary County Council for the above planning proposal because of the long term existing problems of sewage and flooding on the street since 2006.

The current water and sewerage system is not fit for purpose, the incidence of flooding and sewage back up is now a regular occurrence much to the horror and dismay of the resident householders.

At our property 9 Grove street with the poor drainage the water floods at the gateway and gushes down the yard like a river stripping the stones and surface and the water pools for days in the lower yard. We are required to resurface yearly. Prior to 2006 we had never witnessed any flooding through our life time!

At 11 Grove Street, our tenant is a single working mother and her life is greatly impacted by the flooding as the water gushes under the front door and has swamped the whole of the ground floor area on several occasions.

We fully appreciate the need for social housing, however can you confirm if part of this development includes a solution to the issues we and the other residents have being raising for a number of years in relation to sewage and surface water . We believe the added load of the proposed development will increase the impact on existing resident's, we are not prepared to continue suffering the inconvenience and damage it caused to our properties

We look forward to hearing from you at your earliest convenience,

Kind regards

Marion Tierney
